

Inclusive practices in response to the German refugee influx: support structures and rationales described by University administrators

Lisa Unangst, Bernhard Streitwieser¹ (Boston College, USA)

Abstract:

The refugee influx to Germany has challenged institutions of higher education (HEI's) to develop programs and policies that further support a diverse population of students. Building upon a small number of published works focusing on this highly dynamic environment, we present an analysis of two related studies focused on university administrators' perceptions of approaches to refugee student support at their institutions. Data from interviews and analysis of programming indicate that attaining German language proficiency at the C1 level is a significant barrier for refugee students; that there are key differences in the types of programs offered in distinct university contexts, which may relate to degree of university leadership or administrator background and interest; that the definition of "success" from the university perspective is often opaque and inconsistent; that managing refugees' expectations is a challenge; that there is a desire to enable more Muslim refugee women university access; and that there are large gaps in the number of students interested in study and those actually enrolling in degree programs. This paper presents interview data and document analysis collected from twelve universities, and suggests further areas for inquiry.

Keywords: Germany; refugees; administration; organizational structure; student support

1. Introduction

New and rapidly evolving challenges in the German post-secondary ecosystem have followed the recent influx of refugees from the Middle East, North Africa and beyond. Actors in the public, private, and community-based sectors alike have contributed resources and initiated programs seeking to address some of these challenges and capitalize on opportunities (for example, utilizing MOOCs in new and innovative ways). However, it is the 16 federal states that are primarily responsible for setting higher education policy, and indeed, public universities are the primary providers of post-secondary education in Germany. Thus, policies set by the states are mediated both by federal government structures and supports -- German Academic Exchange Service (or DAAD) funding serving as a good example -- as well as by institutional priorities. Indeed, the influx of refugees to Germany and significant shifts in higher education policy make this a timely human rights issue with broad impact. As Kogan, Gebel, and Noelke write, “understanding how different education systems generate or mitigate social inequalities in education is a central aim of social stratification research” (Kogan, Gebel, & Noelke, 2011, p. 70) – refugees in the German context encounter distinct supports and barriers in accessing higher education.

This paper highlights the supports developed by 12 German universities for refugee students, probing these structures through two separate interview-based studies conducted by the authors, and targeting university faculty and staff. With an eye toward informing both practitioners and academics in the field, this paper presents data and seeks to encourage change at the institutional level, enabling understanding for and direct support of refugee student populations.

2. Background

As asylee and refugee numbers in Europe swelled from 2014 to 2015, German Chancellor Merkel took the rather remarkable step of committing significant resources to the support of unregistered refugees, issuing a call to action enshrined in the now famous phrase, “Wir Schaffen Das” (‘We will manage it’). “In September 2015, Berlin pledged 6 billion euros (\$6.6 billion) to support the 800,000 migrants—about quadruple the number from 2014—it was expecting to receive by the end of 2015” (Park, 2015). However, initial optimism about taking a lead role in the refugee crisis soon turned to doubt, in large part because the financial burden was (and remains) substantial, with many costs falling directly on towns and municipalities. *Die Zeit* has estimated that costs ranged among German cities between Euro 132 and Euro 1,666 per refugee per month in Germany (Friedrichs & Malter, 2016).

Higher education in Germany is tuition free, for domestic as well as for most international students, including refugees. Further, all students who complete the university entrance qualification known as the Abitur become eligible to enter any public institution. However, because there are more applicants than spaces, in many institutions (particularly in the more popular metropolitan centers like Berlin or Munich), only those with top grades will be admitted; the problem is further heightened in the most popular subject areas. With their asylum status as a special consideration refugees do not however generally receive differential treatment in admissions decisions and must compete with all international students. However, while admission is competitive, there is some anecdotal evidence to suggest that there may be an informal cap on the number of refugee students per program.

Broadly speaking, the recent refugee influx has spurred the creation and extension of a suite of services for refugees who seek to enter the university in Germany. These services include verifying higher education entrance credentials, ensuring German language competency through preparatory classes, offering buddy and mentoring programs, auditing classes, and providing additional guidance and individual consultations services. Three general types of support ease the path to refugee entrance to German higher education. First, if tangible credentials are unavailable (if a refugee had to flee without documentation), one’s university entrance qualification, or *Hochschulzugangsberechtigung*, can be verified against the *Anabin* database (“*Anerkennung und Bewertung ausländischer*

Bildungsnachweise”) and then processed at the universities through the *Uni-assist e.V.* organization, which is the credential service provider to universities. Second, the *TestAS* exam is available to verify scholastic aptitude through a centrally administered, standard examination. The test can be taken in numerous languages and is free of charge the first time it is taken. Third, verifying one’s *language proficiency*, which for university study at the BA, MA or PhD level in Germany must be at a level C1 competency, may be completed via a number of widely available testing mechanisms.

3. Theoretical Framework

We ground our study of inclusive practices and institutional supports for refugee students in Critical Theory to explicitly acknowledge the social, historical, economic and ideological forces that impact contemporary German universities as well as their faculty, staff, students, and community stakeholders. That is to say, we acknowledge the impact in Germany – and Western Europe more broadly – of systematic oppressors which necessarily influence the experience of both prospective and enrolled students. As Gutierrez-Rodriguez puts it, universities reflect deeply entrenched social inequalities marked by class, race, disability and migration...Thus, universities reflect the inherent social inequalities within the nation state. When it comes to German and British state universities, what becomes apparent is the class and racial stratification of these institutions (Gutiérrez-Rodríguez, 2016) .

Critical Theory allows for both macro and micro level exploration, which works well in analyzing narrative work: administrators, students and faculty alike have direct experiences that shed light on campus, area, and national phenomena, as well as on specific student support programs as they exist in the German context.

Further, in the mode of Solórzano et al., we situate our work within a transformative paradigm that emphasizes “the centrality of experiential knowledge” and encourages an intersectional approach, calling attention to the experiences of marginalized groups such as refugees (Solórzano, Ceja, & Yosso, 2000, p. 63). Finally, we focus on the power dynamics of the university setting, which can be split in broad terms into *de facto* (in practice) and *de jure* (formalized) operations.

As noted by Hurtado, “Researchers who use a transformative lens are typically engaged in a research process that helps educators and students divest from inequality embedded in norms and structures to devise solutions for social and institutional change” (Hurtado, 2015, p. 290). Indeed, researchers in this mode respond directly to Bourdieu’s problematization of the school-based “reproduction of existing power relations in society by privileging the cultural background of students of the dominant class” (Kanno & Varghese, 2010, p. 313). That is, transformative research commits to offering prompt, practical solutions for disadvantaged or marginalized groups. Transformative work is critical, in our view, to an exploration of refugee issues; not only have students of color, migrant and refugee students (distinct categories which may overlap) been traditionally marginalized in the post-secondary education sphere, but given massification, neo-liberalism, and immigration reform (which continue to produce structural changes), a closer examination of this sector is indicated (Heath, Rethon, & Kilpi, 2008; Kristen & Granato, 2007).

4. Methodology

In developing their interview protocols, both authors structured open-ended items with prompts that allowed ample opportunity to delve deeply into issues and experiences when the interviewee allowed, while still maintaining a neutral stance as the researcher. Participants in interview series A (conducted by Unangst) were all attached to public research universities in northern or central Germany, with an even distribution among large cities, a medium sized city, and large towns. All participants were recruited through personal outreach, and interviewed for about sixty minutes in nine in-person and one Skype interview. A standard interview protocol was employed, with questions addressing

administrator/faculty background, experiences with refugee and migrant students over time, conceptions of diversity at their university, and institutional supports for their programming areas.

Participants in interview series B (conducted by Streitwieser) came from three universities of applied sciences (*Hochschulen*) in Berlin and were recruited by a well networked senior administrator from one of the institutions. The data were collected over four days in January 2017 through a series of one hour long interviews. Four university administrators charged with refugee integration, and two groups of six refugees each in focus groups were interviewed, however in this paper we focus on the administrator interviews (an analysis of the refugee student data is currently being prepared for separate publication²). A standard interview protocol was used and questions addressed to administrators asked them to describe the situation of refugees seeking access to their university, what their main constraints and supports were, how they feel the higher education sector is responding, what their motivations and goals were for working with this population, and what they expected the ramifications to be in coming years.

Respondent	Number	Gender	Migrant Background	University type
Faculty	5 (Series A)	2 male, 3 female (Series A)	1 faculty (Series A)	Research Universities (Series A)
Administrators	5 (Series A) 2 (Series B)	3 male, 2 female (Series A) 1 male, 1 female (Series B)	2 administrators (Series A) 1 paid student administrative assistant (Series B)	Research Universities (Series A) Universities of Applied sciences serving 10,000+ students (Series B)
German student support	3 (Series B)	2 female, 1 male (Series B)	1 male	
Totals: 16				

Table 1: Demographic characteristics of interview participants, Series A and B

In reviewing interview transcripts, an open coding technique was utilized to identify main concepts emerging from participant insights and observations. Next, axial coding was performed to group concepts into “families” employing a critical lens (Kaveh, 2014). While, assuredly, additional coding might result in important findings, the main emphasis in this iteration of analysis was to identify broad themes relevant to a comparative case study of refugee student supports at German universities.

In the mode of Pugach and Goodman, we seek in this paper to offer a transparent evaluation of our own positionalities, so as to provide important detail and nuance on the role of the researcher (Pugach & Goodman, 2015). As a graduate student and tenure-track academic who have worked on questions surrounding educational policy relating to the education of migrant populations in Germany (Streitwieser, Miller-Idriss & deWit, 2017; Streitwieser, Brueck, Moody & Taylor, 2017), we are both interested on a personal and professional level in equitable access and attainment. As a result, we view

² Streitwieser, B. (in progress). Integration of Refugees into German Higher Education: Seeking Access to Berlin Universities. Chapter proposal accepted for inclusion in K. Magos & M. Margaroni for a Special issue on “Refugees Education and Experience” in the *Global Education Review*, Volume 5, No. 4, November, 2018.

reporting in the popular media on the refugee influx and education as well as research literature with a particular, critical lens. As Kilbourn writes,

A fundamental assumption for any academic research is that the phenomena (data) that we wish to understand are filtered through a point of view (a theoretical perspective)—that is to say, it is assumed that there is no such thing as a value-free or unbiased or correct interpretation of an event. Interpretations are always filtered through one or more lenses or theoretical perspectives that we have for “seeing” (Kilbourn, 2006, p. 545).

5. Key findings

5.1 German language proficiency as a significant barrier

German is a difficult language, both grammatically and phonetically, and as it is used colloquially is distinctly different from the way it is used in professional situations. Arguably, university-level German is the most complex, and learning the particular academic language (*Fachsprache*) is exceedingly difficult. To learn this level of German sufficiently to successfully understand lectures and to produce quality written work takes time. Administrators in Series B in this regard noted frequently that refugees face a particularly difficult challenge as they compete with often more linguistically facile international students, who may have a much longer history and familiarity with the German language (for example a Dutch or a Russian student) than a newly arrived refugee. Fear of inadequacy in the German can then translate into a stronger reluctance to attend lectures and ask questions, thus further hindering their integration. As the Staff Coordinator of Refugee Affairs at one Berlin universities noted, “My goodness, it will not just take a few months but a few years. How are they supposed to get by with just a rudimentary understanding of the language?....If someone’s been a foreign student in Germany for years, or maybe worked here as an Au pair, they pose significant competition to refugees, so language is really the main and first hurdle that they need to overcome.... I tell them the story of a Finnish student who also had a very hard time getting into a German university so they won’t think it’s just being made difficult for Syrian students.”

Given that prospective students with a refugee background enter Germany with varied levels of German proficiency, the length of time to acquire even B1 level proficiency (required for applicants to the university pathway programs surveyed) may be substantial. Pathway programs are not credit-bearing programs, but rather span a range of language and orientation offerings, aiming to prepare students with a secondary-level leaving certificate to successfully enroll in a degree granting university program. Not all students are familiar with this two-tiered system of study encountered by most refugees: as one interview participant in Series A put it, he spent a lot of time telling students “it’s going to take longer to get into the university system and even to graduate from the university than they were expecting.” As noted by one staffer, a language preparation program launched at his institution was meant to bridge two language levels (from B1 to C1) in five months (in its first iteration), and the time allocated was found to be insufficient. The program was subsequently extended to six months, and a proposal for the third iteration of the initiative outlines a course of one year in length.

Several authors have noted that the relatively high threshold of C1 German language proficiency – generally required to enter a German language university degree program – prevents refugee students from accessing credit bearing study for some time. C1 level proficiency is defined by the Council of Europe’s portal as follows:

[Student] can understand a wide range of demanding, longer texts, and recognise implicit meaning. Can express him/herself fluently and spontaneously without much obvious searching for expressions. Can use language flexibly and effectively for social, academic and professional purposes. Can produce clear, well-structured, detailed text on complex subjects, showing controlled use of organisational patterns, connectors and cohesive devices (Council of Europe, 2017).

Further, one interview participant in Series A highlighted the even higher language threshold for teaching training programs, which is set by the state at a C2 level.

In addition to these barriers to degree program entry, another difficulty identified by interview participants in Series A was in absorbing content knowledge concurrent with learning new academic vocabulary. One administrator reported that a degree-seeking student with C1-level German skills dropped out of their political science program for this very reason: “He took classes for the first six weeks and then he terminated his university program because, he said, the language barrier is so high” and went on to note that it was the *fachsprache* (subject-specific language) that was the main difficulty. The student has since taken an internship in the field and plans to re-apply in the future, after having acquired these subject-specific skills.

5.2 Distinct programs offered in distinct university contexts

The development of refugee support structures has varied widely by university. At one institution included in Interview Series A, an orientation program is limited to six-eight weeks, after which “people can go into the educational settings and find out if the educational system in Germany will suit their expectations” and then pursue being admitted as a degree-seeking student in the subject of their choice (once they meet language and secondary school leaving certificate requirements).

Further, it seems that the professional background of key constituents plays a critical role in how these programs evolve. Given the structure of primary financial support for most refugee programming, this is indeed logical: the DAAD’s *Integra* program has funded a range of initiatives proposed by post-secondary institutions, which were developed to match university staff capacity and perceived current needs (Kanning, 2017). For instance, one university staff member interviewed in Series A who has administered refugee programs since November 2016 noted that her prior experience working for the university played an important role in her current work. Building on a network of university, political, and community-wide contacts she had established over the previous years, she found it relatively easy to develop a range of seminars and modules which introduced refugee students enrolled in pathway programs to various academic specialties at the university, allowing them to consider whether they might like to study the topic more intensively. Further, she is responsible for continuing a pre-existing series of networking meetings for community stakeholders working on refugee issues.

Another interview participant in Series A indicated that his university had launched programs supporting prospective refugee students in fall of 2015, after the city had received a swell of refugees in summer of that year, and that it was very difficult to build upon the initial program offerings for the first academic year, given that offerings were closely tied to planned seminars and other academic offerings. This participant also noted the emphasis on the financing of education in his university’s pathway program, and provided an example of how critical this issue can be to students: a student who had attended several consultations with university staff over summer months made the staffer aware that he was living in a tent, and as winter approached, his situation became more acute. The staffer himself estimated that he had spoken with over twelve agencies in the area, trying to assist the student with financing and housing, and that this experience (while extreme) highlighted how difficult the process of resettlement can be for refugee students. The staffer reported, “we had to get in contact with a dozen... even more... different institutions, which all said ‘ok, you have a problem, we know that problem, and we would be responsible, but we cannot help because first of all you have to go there, and then you have to go there [to different offices].” He ended by saying that “that was so striking for me...how hard it was for *us* even to get clear information, to get clear direction... it must be really, really hard for people that don’t know the system, that don’t know the language... that don’t even have a place where they can rest.”

Still another interview participant in Series A, a faculty member, noted that her university had offered to host refugees on the university campus itself at the beginning of the refugee influx, and then convened a task force comprised of various university stakeholders to identify areas in which the institution could support prospective refugee students. She noted that she was not clear on whether students from a refugee background received, for instance, extra time for exams, which would be made available to other students who qualified for a *“Nachteilsausgleich”* (accommodations), but that she was in support of such an initiative.

5.3 “Success” in refugee support programming is opaque and inconsistent

Though how “success” was measured at respective institutions was not a question explicitly addressed in either interview series, this emerged as a clear theme given a lack of data on student participation, lack of benchmarking practices, uncertainty regarding future funding, and lack of a clear mission or vision at the institutional level. In part this difficulty measuring success through conducting a more longitudinal type evaluation is hampered by Germany’s very strict data protection laws (*Datenschutz*), which make student tracking particularly challenging. Universities, as a result, may only be able to document the longer-term success of their refugee students after they become officially matriculated as students anecdotally and to the extent the student decides to stay in touch with them to stay in touch with the student. In this regard we may conceive of data lacking on several levels: first, almost all interview participants noted that their institution had had very little idea how many refugee students to expect when programming was launched, and many noted that this was still the case. For some universities, most of the students served to date arrived on campus in 2015, while for others, 2017 represented a year of significant growth in refugee student engagement. One interview participant in Series A noted that his institution enrolled 30 language program participants in the summer semester of 2015, and by summer 2017, 330 students were enrolled in at least one program at the same site. Another staffer noted that their program launched in October 2016, when they had “no idea what the needs of the people participating in the program would be” and that they “developed the program on the fly”. Only recently, he said, had they been able to plan ahead and proactively “plan solutions” for students, almost two years after program implementation.

In 2016, the secretary general of the DAAD, Dorothea Rüland, made the estimate publicly that 30,000-50,000 refugees would be prepared—having overcome administrative hurdles and language requirements—to seek access to higher education in the next several years (Rüland, 2016); Universities surveyed did not have a “target” number of refugee students that they would like to be serving, though as noted previously some had capacity limits on the number of students they were able to serve. It must be noted that while in 2015 close to one million new refugees (890,000) entered Germany, by 2016 due to an EU deal with Turkey and the closure of borders in transit countries, the refugee influx entering Germany been reduced to 280,000 (Trines, 2017).

For some of the administrators we spoke with in our study, this change in sheer numbers converts what the media had previously termed ‘crisis’ into more of an interesting challenge and an opportunity to do things differently at least as far as refugee integration into the university sector is concerned. According to a study by the German Rectors Conference (HRK), as of 2017 1,140 refugees are officially enrolled in university study in the country, which is a fivefold jump over six months, and the numbers of those seeking guidance to enter university has doubled over just one semester.

Students, staff and faculty interviewed almost universally displayed a lack of knowledge of refugee support structures at other universities. None of them had a clear sense of the most successful universities in this area; they were not aware of the number of refugee students in pathway or degree programs of other universities. The student interviewed was the only participant to mention the recognition that DAAD offers to notable refugee support programs. The DAAD has a small-scale competition that highlights student-led university programs that support refugees, and it also holds

regional conferences to highlight successful programs in the area. However, apparently neither of these initiatives were known to the interviewees in Series A.

Indeed, it seems as if the DAAD as the primary funder of such programs would be the natural party to distribute this type of information. In any case, the lack of knowledge of the scope of institutional responses may demonstrate a lack of familiarity with best practices, and of course this necessarily limits the construction of success in any given campus context.

Further, all institutions surveyed in Series A noted uncertainty regarding future funding for refugee support programs. While defining concrete funding mechanisms was not a primary focus of this project, it seems that some universities dedicate more institutional funding to refugee-relevant programming, while others rely primarily on DAAD support, and still others seek a combination of institutional, DAAD, and state or federal level support. Naturally, a lack of clarity around the sustainability of programming impacts the scope of work attempted, and additionally creates stress for staff and faculty who already feel overburdened by their workload and student needs.

Finally, while a few interview participants in Series A highlighted the direct involvement of their university's vice president or rector in refugee programming, it was primarily related to securing funding for *Integra* programs, and not related to an overarching, long-term vision for refugee integration. That is to say, it does not seem that senior leadership level "talking points" have translated to the faculty and staff level on this topic. One exception is notable: a faculty member who also holds a senior administration appointment spoke at length about their goals for the institution as a whole around not only refugee integration, but issues of diversity more broadly, including the integration of students from a migrant background. However, this individual noted repeatedly that university politics and power structures made change slower than might be optimal. To be fair, change management is a chronically vexing challenge for most large institutions, whether they are universities, businesses or any other type of enterprise.

One issue that is worth contemplating is the substance, not just societally but also within the universities, of the oft-touted 'Welcome Culture.' While the German response from the highest levels of government down to the university level were clearly inspired by Chancellor Merkel inspiring the "Wir schaffen das" mantra, it is questionable whether the response was one of obligation and a desire to continue to rehabilitate the country's image, or a truly energetic movement to take up refugees and help them find their way throughout German society. As one student administrator in Series B questioned, programs like the *Integra* initiative were created by universities because they received support from the DAAD, however were these programs created because other universities were creating them and they seemed necessary, or was the motivation a different one? The answer to this question varied among respondents in Series B and was dependent on individual circumstances. However, this student felt that many of the current programs on offer were not well thought out or carefully targeted to meet the needs of the refugees themselves. She found it highly problematic that refugees had not (to that point) been asked in an evaluation study to critique the services they were receiving; the administrator understanding of programmatic success, then, may be only anecdotally understood. The respondent also noted that any future survey including identifying information would likely prevent a refugee student from responding candidly. After all, as she noted, who will bite the hand that feeds you?

5.4 Enabling access for Muslim women refugees is a key goal

It seems clear that interview participants perceive women to comprise a minority of refugee students being served at their institutions. In the Series A interviews, one staff member noted that 14% of participants in refugee support programs at her institution were women, and that the university was making an effort to consider measures such as combining child care with programmatic offerings in

order to increase participation in this area. Notably, the staff member who highlighted this gap identified herself as having a background in gender studies. In Series B the administrators also voiced their concerns over the small number of Muslim refugee women in language courses then going on to seek entrance into university study. In this regard, the administrators noted a struggle between on the one hand wanting to encourage a greater participation among these women, while at the same time not seeking to step into unfamiliar cultural territory and offend established norms.

5.5 Gap between refugees interested in study and those enrolling as students

Several interview participants in Series A reported that the number of enrolled, degree seeking refugee students at their institutions in 2017 was lower than they had anticipated. Some interview participants went further, indicating that their sense was that education officials had underestimated how difficult it would be for refugee students – even those with strong academic backgrounds – to access public higher education in Germany. One staffer noted that there are “large groups” of people who fulfill the “basic requirements” to get into university but don’t attend “because there are so many barriers to get into the university” and that this gap between “formal” and “actual” access didn’t allow for a “diverse student body.” Indeed, another interview participant noted that he believed that in medicine, about 600 people applied for study places each year, though only about 15 places were available.

While degree seeking student numbers stemming from the refugee influx are low, enrollment in so-called pathway programs (which are housed at various so called *studienkolleg* locations and other sites) is relatively strong, with some universities serving several hundred students in this capacity. While pathway programs differ by site, all of those surveyed offer language instruction, as well as some version of orientation programming, which may include: introduction to library services, access to sports offerings, and research and writing tutorials specific to the German context. One interview participant in Series A noted that while the pathway program located on the university campus itself was the most popular program in the (relatively rural) region, that program’s enrollment was capped, and therefore prospective students were often forced to enroll in pathway programs at different sites in the region – it would be interesting indeed to compare the university enrollment ratios of graduates of the on-campus and off-campus programs.

During another interview in Series A, a staff member at a second relatively rural university noted that in the previous year, there had been 120 applications for the university’s pathway program, and that 40 applicants had been accepted. The same interview participant noted their concern that pathway program students would enroll at other universities when qualified for admittance; there appeared to be a concern for return on investment, as well as perhaps an awareness that certain cities or regions within Germany are perceived as more welcoming to the refugee community. This also indicates a possible roadblock for students: a desire to move to a more welcoming area without the resources to do so. Indeed, in Germany’s response to the current refugee influx (previous crises having been in the early 1990s during the Balkan crisis, before that a variety of less dramatic population spikes through the post-war guest worker programs, and most dramatically in 1945 as millions of expelled ethnic Germans retreated from Eastern Europe toward Germany), Merkel’s government has instituted a program that works to distribute refugees throughout the country in an effort to avoid them congregating in cities and creating what have been referred to as ‘parallel societies’ or ethnic enclaves for lack of a better word.

Several staffers in Series A indicated that students enrolled in pathway programs or individual workshops were sidetracked from pursuing credit-bearing study at university due to mental trauma, health issues, and family crises caused by war, flight and displacement. One interview participant noted that a refugee student from North Africa had had ten family members die during an attempted Mediterranean crossing – indeed, it is not only maintaining mental health which may be a “distraction” from study, but also life outside the classroom which moves forward in sometimes unexpected and

difficult ways. This is an area widely studied among first generation college students in the United States as well as among ethnic minority students in Germany: Claudia Diehl and co-contributors highlight difficulties encountered in student housing for Turkish students in their research (Diehl, Andorfer, Khoudja, & Krause, 2013).

6. Conclusion

While current refugee flows to Germany have abated significantly given current efforts at the federal level to curtail entry by creating “reception centers” in Africa and elsewhere and the EU agreement with Turkey alluded to above, refugees will continue to seek entry to higher education in the country, particularly as more and more attain C1 German language proficiency. This paper has outlined initial findings from two closely related interview series with university staff and faculty at twelve institutions in Germany. We find continued evidence that the C1 language proficiency requirement for entry to a degree program represent the most significant barrier to refugee students; that a wide range of diverse and uncoordinated programmatic offerings exist in distinct university contexts; that “success” in the context of refugee support programs is ill defined and poorly communicated so we do not necessarily know how its implementation; that Muslim women are underrepresented in refugee support programs; and that a troubling gap persists between students interested in study and those enrolling as degree seeking students (as well as the related challenge of the transition from interest to actual enrollment in the face of stiff competition for few spots).

Moving forward, as students from refugee backgrounds continue in pathway programs and enroll as degree seeking students in larger numbers, it will be important to observe whether there are differences in student persistence rates at different universities. Several interview participants at one of the “new” universities founded in the 1960’s noted in Series A that their campus already had a high degree of diversity in terms of socio-economic status and non-traditional student backgrounds, and indicated that they felt this environment was relatively welcoming to those from a refugee background. Campus diversity among many other factors, including state social supports; diversity of the community at large; cost of living, etc., will likely impact persistence for this vulnerable student population. One interview participant in Series A noted that he felt that the university at which he worked ought to “embrace diversity” and that it was “symbolic what we do here.” Indeed, post-secondary education plays (most critically) a practical role in the integration of refugees, but also a symbolic one.
